DETAILED ACTION

Response to Amendment

1. The amendment filed on 7/31/03 has been entered; no new claims have been added.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bryant et al. USPN 6,100,564 in view of Hirano USPN 6,252,280.

Bryant et al. disclose in figs. 4 and 5 an insulated gate type semiconductor device comprised of a semiconductor layer 103 serving as an active region isolated from a semiconductor substrate 101 by a substrate isolation insulating film 102, wherein an insulating film 109 is provided on a surface of a first conductivity type semiconductor region positioned at an interface between that first conductivity type body contact region 113 and a second conductivity type source 211 and drain 212 regions and directly under a gate electrode 112, said gate electrode being provided on the region except for said body contact region, but do not specifically disclose a thicker insulating film at said interface than one directly under said gate electrode.

Hirano discloses (see figs. 1-5, col. 6, lines 16-45 and abstract) an insulating film 9 with a thickness made greater than the thickness of a gate insulating film 5N with a uniform thickness directly under a gate electrode.

Therefore, it would have been obvious to one skilled in the art at the time the invention was made to incorporate Hirano's teachings with the device of Bryant et al since that would reduce parasitic capacitance as taught by Hirano.

Allowable Subject Matter

4. Claims 1, 5 and 9 are allowed.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Unnikrishnan USPN 6,555,446 discloses an SOI device having parasitic capacitance.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this improve the switching speed and the current driving ability.
